

We offer a simulations software designed for the process industry. It's an mass and energy-oriented block-based simulation software developed for complete production-analysis with a focus on the pulp -and paper industry.

We also offer services related to simulations.

### Consultant services

- Dimensioning data for new- or rebuild
- In depth simulation/prediction of quality parameters
- Energy studies and savings
- Pinch data analysis
- Environmental load studies
- Production planning and optimization
- Programming services
- Education in simulation

### Simulation package

- PaperFront® handles all simulation- and prediction issues you may have
- Designed for Pulp- and paper mills
- Dynamic and steady state simulations
- Material, energy and quality evaluation and predictions
- Evaluation of Scenarios
- Production planning in the mill
- Supports DCS import and connection
- Academic version available
