ProcessFront®

What is ProcessFront®?

ProcessFront® is a block-based energy- and mass-oriented simulation software. It contains all the same functions as PaperFront® but designed for the general process industry. ProcessFront® is full of features for control and effectiveness.

In the application you have a very effective project handler to manage projects and settings in your models. Below is a summarized list of some of the functions.

ProcessFront® features

- ProcessFront® handles all simulation- and prediction issues you may have
- Designed for general processindustry
- Ready to use project handler to manage projects and settings in your model

- Dynamic and steady state simulations
- Statistical processes

- Material, energy and quality evaluation and predictions
- Evaluation of scenarios
- Production planning
- Pre/post-production calculation
- Environmental studies

- Chemical components
- Solids and solubles
- Steam and moisture
- Physical properties

- On-line decision systems
- FAT/SAT-testing
- DCS-connections

- Education in process-understanding
- Academic version available
