FrontWay

ProjectFront

What is ProjectFront?

ProjectFront is the project- and scenario handler of PaperFront®. In ProjectFront you can create multiple scenarios with different settings for your models. The scenarios can then control the settings in the model in one click.

These scenarios can either be activated at the start of simulation or during a simulation. Result from simulations can be stored in your project and then generated into reports in Excel for further evaluation.

Summary of the functions of ProjectFront

Projects — Store results and scenarios in different user created projects

Scenario handler — Create scenarios with different settings, such as grammage, turn on and off machinery and more.

Paper settings — Easily create scenarios for paper machines

Reports — Generate reports of the simulation results
